## Ontario Winter Cereal Performance Trials

Data collected 2026

[www.gocrops.ca](http://www.gocrops.ca)

Conducted by the Ontario Cereal Crop Committee  
Current as of August 2026

## **General Information:**

Cereal Performance Trials are conducted annually by the Ontario Cereal Crops Committee (OCCC). For more information about the OCCC, go to [GoCrops](#) website, click on 'View Cereal Info, then "About".

Winter wheat trials are conducted annually at 12 locations across Ontario. Winter barley at 4 locations. A map showing testing areas can be found on [GoCrops](#) under "Performance Trial Results". Trials consist of four replications and are managed according to the recommendations of the Ontario Ministry of Agriculture, Food and Agribusiness. Detailed information about the practices used and explanations of terms can be found on [GoCrops](#) under "Performance Trial Results > Procedures: OCCC Trial Methods & Testing Procedures". Trials are inspected by representatives of the OCCC after heading to ensure that they meet OCCC standards.

"Fungicide Applied" trials for winter wheat refers to trials that receive two applications of a foliar fungicide for the control of leaf diseases and/or Fusarium Head Blight. Fungicide treatments for winter wheat include a T1 (GS 30-31) and T3 (GS 60-65) fungicide application. **The OCCC thanks the Grain Farmers of Ontario, BASF, Bayer and Syngenta for their financial support towards the intensive trials.**

The Yield Index reflects the performance of the variety relative to the average of the trials. Yield Indices are "Heritability Adjusted Relative Values" (HARV), which favour results from trial locations with high repeatability from rep to rep. For more information, see: [Yan: Use of HARV in Variety Trials](#) under gocrops/resources. Index values differing by less than 3 within a column may not represent true differences in yield. Variety yield rankings may vary from year to year. Decisions are best made using data with the greatest number of years.

Heading and Physiological Maturity Days vary from year to year and should only be used to indicate relative differences.

Not all traits are expressed in any given year or area. For traits not reported in a table, see other area trait tables or previous years' performance trial reports. Head to Head comparisons on [GoCrops](#) website give multi-year data for all trait characteristics.

Plant Breeders' Rights Status;   indicates varieties protected under PBR 91 or PBR78. Visit [PBR Facts](#) to learn more.

### Abbreviations:

- JD = Julian Days (days for January 1<sup>st</sup>)
- Fusarium Ratings: "Combined Fusarium Ratings" for winter wheat are based on BOTH Fusarium head blight ratings and deoxynivalenol (DON) levels from inoculated provincial trials. "DON Ratings" are based only on DON levels from inoculated provincial trials Ratings: MR=moderately resistant (best); MS=moderately susceptible; S=susceptible; HS=highly susceptible (worst)
- Lodging and Disease Ratings: For ratings 0 - 9, a high score is undesirable. Disease ratings are taken from naturally occurring infection.
- Winter Wheat Classes: sww = soft white winter; srw = soft red winter; hrw = hard red winter; eow = (Canada Eastern Other Wheat) which does not meet quality standards for sww, srw or hrw; a = awned
- Winter Barley Classes: 2R = 2 Rowed, 6R = 6 Rowed

For more information contact:

Some years specific diseases or weather events impact variety performance. In 2025, stripe rust pressure was extremely high at specific locations, which affected variety performance of non-managed sites in those areas.

More information on winter wheat and winter barley along with general crop reports can be found on [Field Crop News](#)

|                | Redford                  |                 | 99     | 97     | 97     | 95    |
| Means (t/ha)   |                                                                                                             | 7.20            | 7.05   | 6.92   | 6.97   | 7.05  |
| Means (bu/ac)  |                                                                                                             | 107.0           | 104.8  | 102.9  | 103.6  | 104.8 |
| Location-Years |                                                                                                             | 31              | 27     | 20     | 14     | 7     |

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

Stripe rust pressure was severe in 2025, please refer to Table 1a to see yield impact where fungicide was applied for disease control.

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

<sup>1</sup>See Head to Head comparisons on GoCrops.ca website for multi-year data for trait characteristics.

<sup>2</sup>MR=moderately resistant (best); MS=moderately susceptible; S=susceptible; HS=highly susceptible (worst).

<sup>3</sup> For ratings 0-9, a high score is undesirable. Disease ratings are taken from naturally occurring infection. Stripe rust pressure was particularly prevalent in 2024 and 2025, with some varieties being significantly impacted.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit pbrfacts.ca to learn more.

## Ontario Cereal Crop Performance Trials 2026

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

Stripe rust pressure was severe in 2025, please refer to Table 3a to see yield impact where fungicide was applied for disease control.

<sup>1</sup>See Head to Head comparisons on GoCrops.ca website for multi-year data for trait characteristics.

<sup>2</sup>MR=moderately resistant (best); MS=moderately susceptible; S=susceptible; HS=highly susceptible (worst).

<sup>3</sup>For ratings 0-9, a high score is undesirable. Disease ratings are taken from naturally occurring infection. Stripe rust pressure was particularly prevalent in 2024 and 2025, with some varieties being significantly impacted.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit pbrfacts.ca to learn more.

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

Stripe rust pressure was severe in 2025, please refer to Table 4a to see yield impact where fungicide was applied for disease control.

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

<sup>1</sup>See Head to Head comparisons on GoCrops.ca website for multi-year data for trait characteristics.

<sup>2</sup>MR=moderately resistant (best); MS=moderately susceptible; S=susceptible; HS=highly susceptible (worst).

<sup>3</sup> For ratings 0-9, a high score is undesirable. Disease ratings are taken from naturally occurring infection. Stripe rust pressure was particularly prevalent in 2024 and 2025, with some varieties being significantly impacted.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

Stripe rust pressure was severe in 2025, please refer to Table 5a to see yield impact where fungicide was applied for disease control.

<sup>1</sup> Values differing by less than 3 within a column may not represent true differences in yield.

<sup>2</sup> Cultivar yield rankings may vary from year to year. Decisions are therefore best made using data with the greatest number of years.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](http://pbrfacts.ca) to learn more.

<sup>1</sup>See Head to Head comparisons on GoCrops.ca website for multi-year data for trait characteristics.

<sup>2</sup>MR=moderately resistant (best); MS=moderately susceptible; S=susceptible; HS=highly susceptible (worst).

<sup>3</sup> For ratings 0-9, a high score is undesirable. Disease ratings are taken from naturally occurring infection. Stripe rust pressure was particularly prevalent in 2024 and 2025, with some varieties being significantly impacted.

  PBR Status; indicates varieties protected under PBR 91 or PBR78s. Visit [pbrfacts.ca](https://pbrfacts.ca) to learn more.
